

INTERNATIONAL CONFERENCES: TRAVELLING THROUGH TIME. NEW PERSPECTIVES, METHODS AND CHALLENGES FOR UNDERSTANDING LIVESTOCK MOBILITY IN THE PAST

6th- 7th September 2022
Aix-Marseille Université, Maison Méditerranéenne des Sciences de l'Homme, Aix-en-Provence, France

8th September 2022
Excursion to the Ecrins Mountain

Call for abstracts

Whether it is a question of mass migrations, seasonal movements of livestock between complementary pastures, or commercial exchanges, the mobility of animals is a crucial element in understanding the organization of past societies, changes in landscapes, and the history of lands and territories. If the question of livestock mobility has been widely explored in archaeology, the development of bioarchaeological methods in recent years (genomic studies, isotope analyses...) tends to revise our knowledge and to re-examine the scenarios and models of mobility considered until now. In the era of globalization, this session aims to highlight past mobility in all its forms. We will prioritize papers that focus on direct evidence to inform the debate on livestock movements in different regions of the world, but also papers that highlight the limitations or challenges that still exist in terms of methodology. In particular, we will welcome highly interdisciplinary approaches and long-term investigations.

Please send your proposal (abstract of 1,000 characters), with title, authors and five keywords by **30th April 2022** to the following address :
